

ANDROID

Programming basics

Overview

- ▶ Mobile Hardware History
 - ▶ Android evolution
- ▶ Android smartphone overview
 - ▶ Hardware components at high level
 - ▶ Operative system
- ▶ Android App development
- ▶ Why Android Apps?

History of Mobile Hardware

- ▶ **PDA – Personal Digital Assistants were precursors**
 - ▶ Personal data management and productivity (contacts, address book, etc)
 - ▶ Online synchronization
 - ▶ Limited dialup Internet connectivity
 - ▶ Bluetooth
 - ▶ Cell data services - eventually 3G
 - ▶ WiFi
- ▶ **Mobile Phones (early '90)**
- ▶ **PDA's and Phones merge - Palm Pilot, etc,**
- ▶ **Smartphones replaced PDA - more capabilities, browser, apps**

Mobile Phones

- ▶ 1st mobile phone – Motorola Brick DynaTAC 8000x – 1983
- ▶ Bag phones – car phones – early 90s
- ▶ Camera phones – late '90s
- ▶ Addition of data services

Mobile Development Evolves

- ▶ WAP (Wireless Application Protocol) standard/browsers. Wireless Markup Language
 - ▶ Considered clunky and limited, but it was cross platform
- ▶ Proprietary formats emerged to better take advantage of hardware capabilities:
 - ▶ Palm OS (became Garnet OS)
 - ▶ RIM Blackberry OS
 - ▶ Java Micro Edition
 - ▶ Symbian OS (Sony Ericsson, Motorola, Samsung)
 - ▶ Windows Phone (Nokia)
 - ▶ iPhone iOS
- ▶ Major players now:
 - ▶ iOS
 - ▶ Android
 - ▶ Windows Phone 7

Samsung Galaxy S4 COMMUNICATIONS BOARD, FRONT

- **Samsung Exynos 5410**
Exynos Octa Eight-Core processor
- **Samsung K3QF2F200C-XGCE**
2GB LP DDR3 (K4E4E324EB die) mobile DRAM
- **Intel PMB9820**
X-GOLD 636 Baseband Processor
- **Samsung KMV3W000LM-B310**
Multichip Memory - 64 MB Mobile DDR SDRAM, 16 GB MLC NAND Flash, Controller
- **Samsung S2MPS11**
Power Management IC
- **Wolfson Micro WM5102E**
Audio Hub CODEC with Voice Processor DSP
- **Atmel UC128L5-U**
32 bit Microcontroller with 128KB Flash (custom package)
- **Broadcom BCM4335**
Wi-Fi 802.11 a/b/g/n/ac, dual-band, DLNA, Wi-Fi Direct, Wi-Fi hotspot all-in-one IC

TECHINSIGHTS

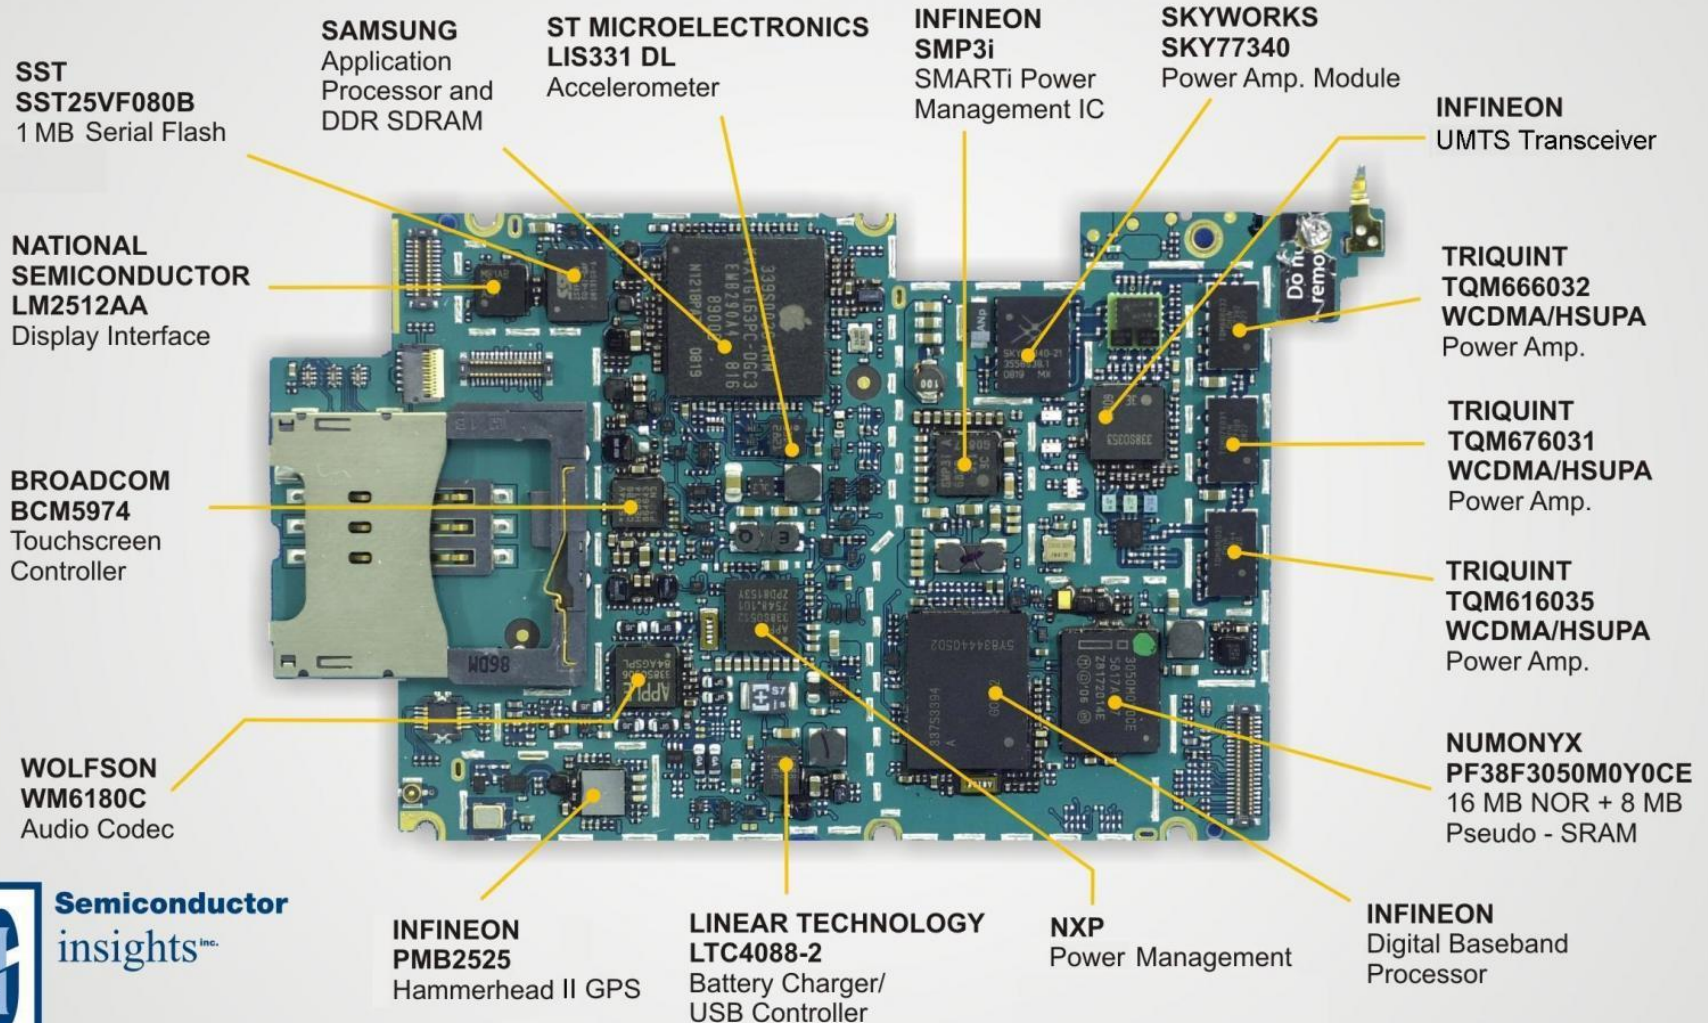

Samsung Galaxy S4

- **Intel PMB5745**
Intel SMARTi UE3 RF Transceiver
- **Broadcom BCM20794**
NFC controller IC
- **SkyWorks SKY77615-11**
Multimode Multiband Power Amplifier Module (WCDMA-HSDPA-HSUPA)
- **Murata SWC GKF48**
Antenna Switch Module
- **Maxim MAX77803**
Power Management
- **SIMG (Silicon Image) SiI8240**
MHL 2.0 transmitter with HDMI input

TECHINSIGHTS

SMARTPHONE: INTERNAL STRUCTURE (simplified)

Main HW Difference with iOS

- Different device size (more HW manufacturers)
- Expandable memory
- USB connection
- External HW easier to product

Android evolution

ANDROID basics

Android project starts ...

- ▶ 2003: The project starts (OS for mobiles)
- ▶ 2005: Google purchased the initial developer of the OS, Android Inc.
 - ▶ Start Dalvik VM development
- ▶ 2007: Open Handset Alliance (OHA) consortium announced (34 founding members)
 - ▶ Mobile handset makers (i.e. HTC), software developers (Google), some mobile carriers (i.e. Telecom) and chip makers (i.e. Qualcomm)
 - ▶ SDK development

... continues ...

- ▶ **2008: T-Mobile G1 announced**
 - ▶ SDK 1.0 released
 - ▶ Google sponsors first Android Developer Challenge
 - ▶ Android Open Source Project (Apache license)
 - ▶ Android Dev Phone 1 released

- ▶ **2009: New SDK release**
 - ▶ **Cupcake (SDK 1.5)**
 - ▶ Softkeyboard with autocomplete feature
 - ▶ Auto-rotation option
 - ▶ **Donut (SDK 1.6)**
 - ▶ New camera features
 - ▶ Search features improved (Quick/Voice)
 - ▶ **Éclair (SDK 2.0/2.0.1/2.1)**
 - ▶ New camera features
 - ▶ Multiple accounts

android
open source project

... until ...

- ▶ 2010: Nexus One released to the public
 - ▶ Froyo (SDK 2.2)
 - ▶ Expandable memory
 - ▶ USB tethering
 - ▶ Gingerbread (SDK 2.3)
 - ▶ UI update
 - ▶ NFC
- ▶ 2011: New SDK release
 - ▶ Honeycomb (SDK 3.0/3.1/3.2) for tablets only
 - ▶ New UI tablet oriented
 - ▶ Multi-core processor supporting
 - ▶ Ice Cream Sandwich (SDK 4.0/4.0.1/4.0.2/4.0.3)
 - ▶ WIFI direct
 - ▶ Changes to the UI
 - ▶ Face unlock
- ▶ 2012:
 - ▶ Ice Cream Sandwich (SDK 4.0.4)
 - ▶ Stability improvement
 - ▶ Jelly Bean (SDK 4.1)
 - ▶ Google Now

... last days

▶ 2013:

▶ Kit Kat (SDK 4.4)

- ▶ NFC capabilities through Host Card Emulation
- ▶ Wireless printing support
- ▶ Storage access framework
- ▶ New framework for UI transition

▶ 2014:

▶ Lollipop (SDK 5)

- ▶ Android RunTime (ART) with ahead-on-time (AOT) compilation
- ▶ 64-bit CPU

Last release: Marshmallow [2015]

▶ 2016:

▶ Marshmallow(SDK 6.0)

- ▶ Introduction of Doze mode, which reduces CPU speed while the screen is off in order to save battery life
- ▶ Wireless printing support
- ▶ Post-install/run-time permission requests
- ▶ App permissions now granted individually at run-time, not all-or-nothing at install time.

Last Year Releases Distribution

- ▶ Froyo: 0.3%
- ▶ Gingerbread: 5.7%
- ▶ IceCreamS: 5.3%
- ▶ JellyBean: 39.2%
- ▶ KitKat: 39.8%
- ▶ Lollipop: 9.7%

Current Releases Distribution

- ▶ Froyo: 0.1%
- ▶ Gingerbread: 2.2%
- ▶ IceCreamS: 2.0%
- ▶ JellyBean: 20.9%
- ▶ KitKat: 32.5%
- ▶ Lollipop: 35.6%
- ▶ Marshmallow: 7.5%

Android is Growing Fast

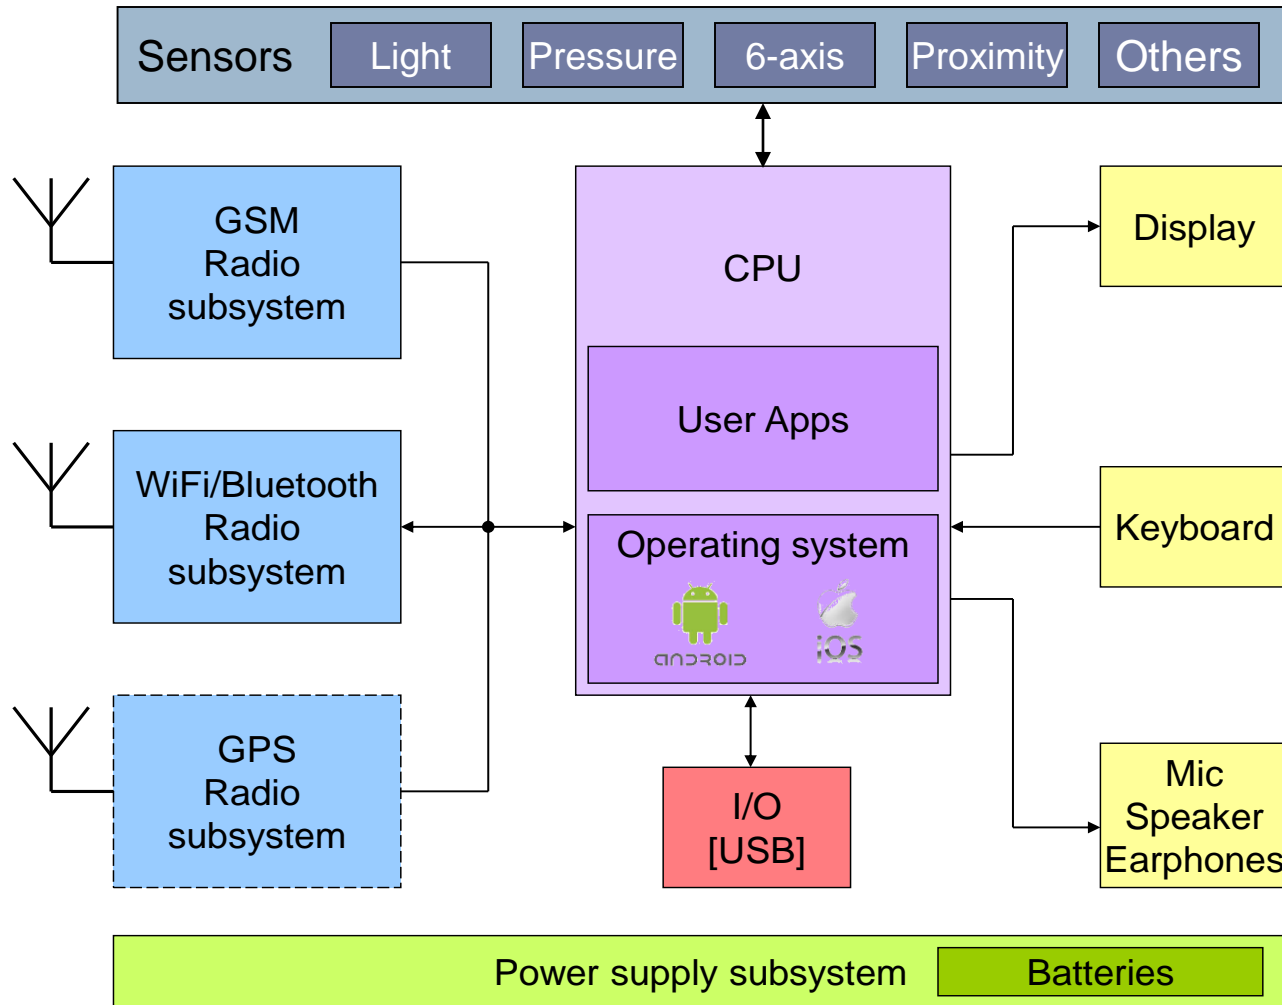

- ▶ It's the largest installed base of any mobile platform and growing fast (1.4 billion users)
- ▶ Every day more than 1.5 million new Android devices are activated worldwide
- ▶ 53.3% of the total smartphone' market in 2016
- ▶ 70% of the overall tablet market
- ▶ Not only smartphone: Smart tv, radio (more than 4000 devices)

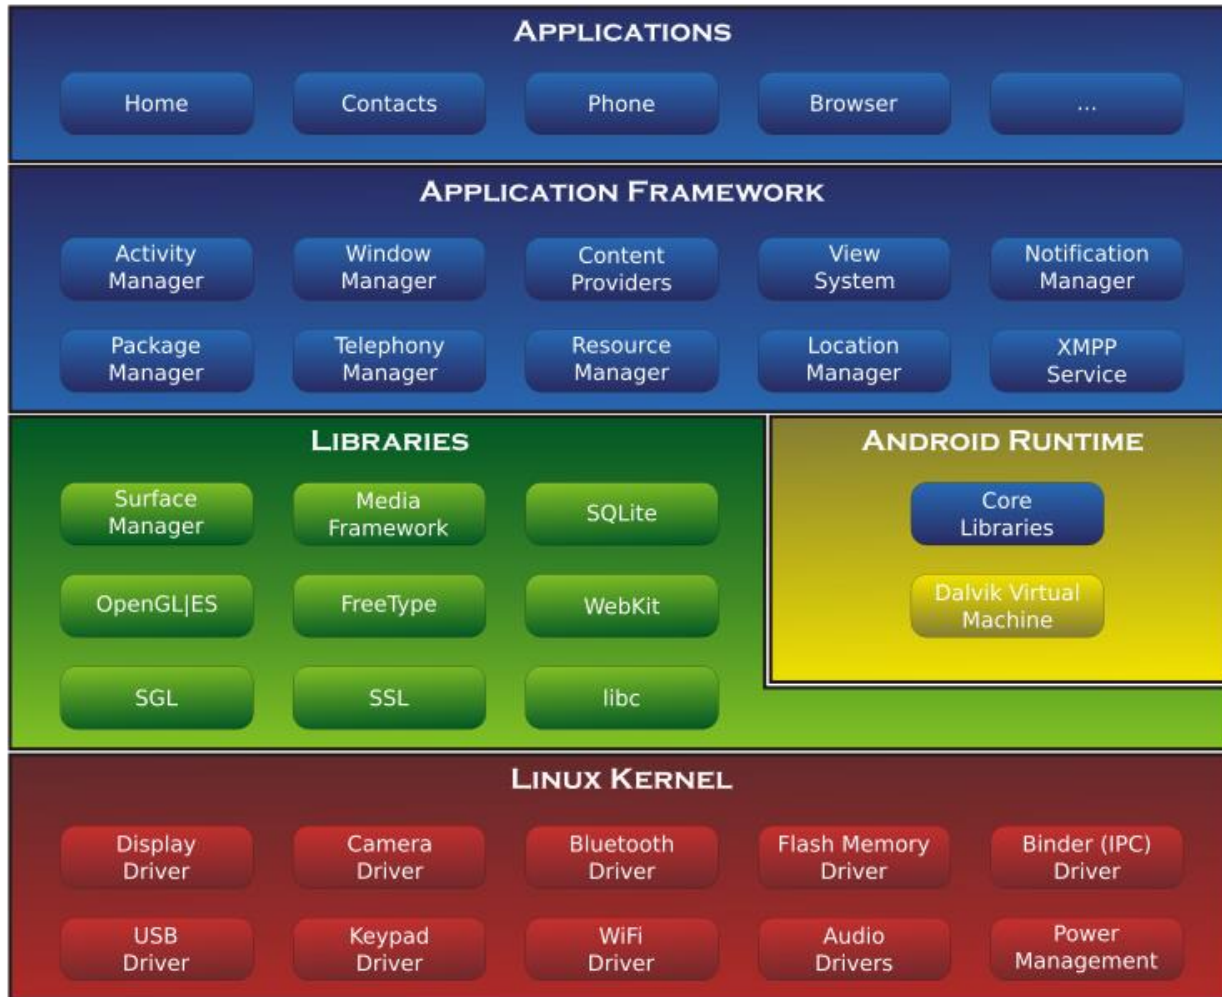

Android is Growing Fast

Smartphone high level block diagram

Android Architecture

Linux Kernel

- ▶ Android Linux Kernel has differentiated from Linux Kernel
 - ▶ From 2.6 ver to 3.8
- ▶ Basic SO services
 - ▶ Abstraction between hardware and software
 - ▶ Security
 - ▶ Memory management
 - ▶ Process management

Libraries

- ▶ Run in system background
- ▶ Use C/C++ language
- ▶ Four types of libraries
 - ▶ Bionic Libc, system C libraries
 - ▶ Function libraries, supporting multimedia, web browser, SQLite
 - ▶ Native servers
 - ▶ Hardware Abstraction Libraries

Core Libraries

- ▶ Android includes a set of core libraries that provides most of the functionality available in the core libraries of the Java programming language
 - ▶ Core APIs for Java language provide a powerful, yet simple and familiar development platform

Dalvik Virtual Machine

- ▶ **Android custom implementation virtual machine**
 - ▶ Provides application portability and runtime consistency
 - ▶ Runs optimized file format (.dex) and Dalvik bytecode
 - ▶ Java .class / .jar files converted to .dex at build time
- ▶ **Designed for embedded environment**
 - ▶ Supports multiple virtual machine processes per device
 - ▶ Each process an instance of the DVM
 - ▶ Highly CPU-optimized bytecode interpreter
 - ▶ Efficiently Using runtime memory
- ▶ **The Dalvik VM relies on the Linux kernel for underlying functionality (threading and low-level memory management)**

Application Framework

- ▶ **Simplify the reuse of components**
 - ▶ Applications can publish their capabilities and any other application may then make use of those capabilities
- ▶ **Applications is a set of services and systems, include**
 - ▶ Views system, content providers, resources manager and so on
- ▶ **Frameworks**
 - ▶ Activity Manager
 - ▶ Notification Manager
 - ▶ Resource Manager
 - ▶ Content Providers
 - ▶ Views

Applications

- ▶ Contain a set of core applications including an email client, SMS program, calendar, maps, browser, contacts, and others

- ▶ All yours Apps will belong to this layer
- ▶ All applications are written in Java programming language

Software Development Kit (SDK)

- ▶ Software Development Kit (SDK) enables developers to create applications for the Android platform
- ▶ Sample projects source code
- ▶ Custom virtual machine
- ▶ Development tools:
 - ▶ Dalvik Debug Monitor Service (DDMS)
 - ▶ Android Debug Bridge (ADB)
 - ▶ Android Emulator
- ▶ SDK download link:
<http://developer.android.com/sdk/index.html>

Emulator

- ▶ Virtual mobile device on PC
- ▶ Allows to develop and test apps on PC without a physical device (simulate interrupt)

Android SDK Emulator

Traditional VS App programming

- ▶ Only one App at a time (“multitasking”)
- ▶ Only one window → Simplified UI
- ▶ Limited system access (“sandboxing”)
- ▶ Limited resources and memory.
- ▶ Instant App opening and closing: application should start and quit instantaneously.
- ▶ App has her own lifecycle....
- ▶ Code must apply to many kind of devices

Android App Basic Components

▶ Activities

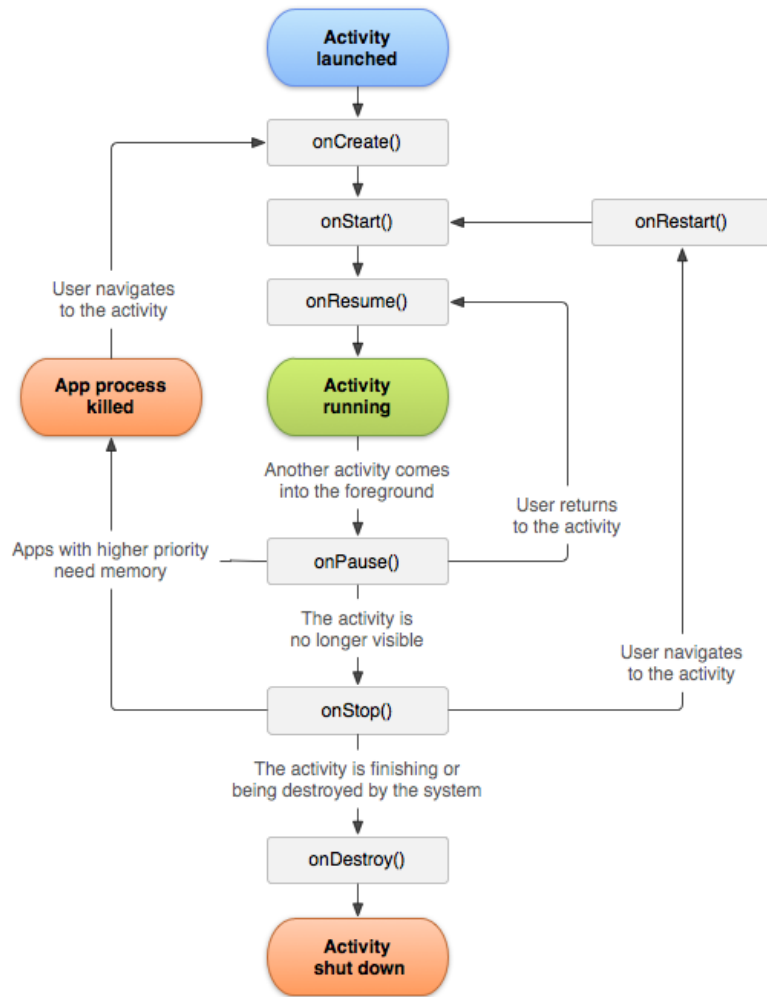

- ▶ Single screen of application, only “on screen” activity is in running state
- ▶ Single App many Activities which can exchange data
- ▶ Activities have a event-driven life-cycle
- ▶ Activities is composed by graphic components
 - ▶ UI is built using a hierarchy of View and ViewGroup objects
 - View are usually UI widgets (e.g. textfield, button)
 - ViewGroup are invisible view containers that define how the child views are laid out (grid or list)
 - ▶ Android provides an XML vocabulary that corresponds to View and ViewGroup so you can define your UI in XML using a hierarchy of UI elements

Widgets

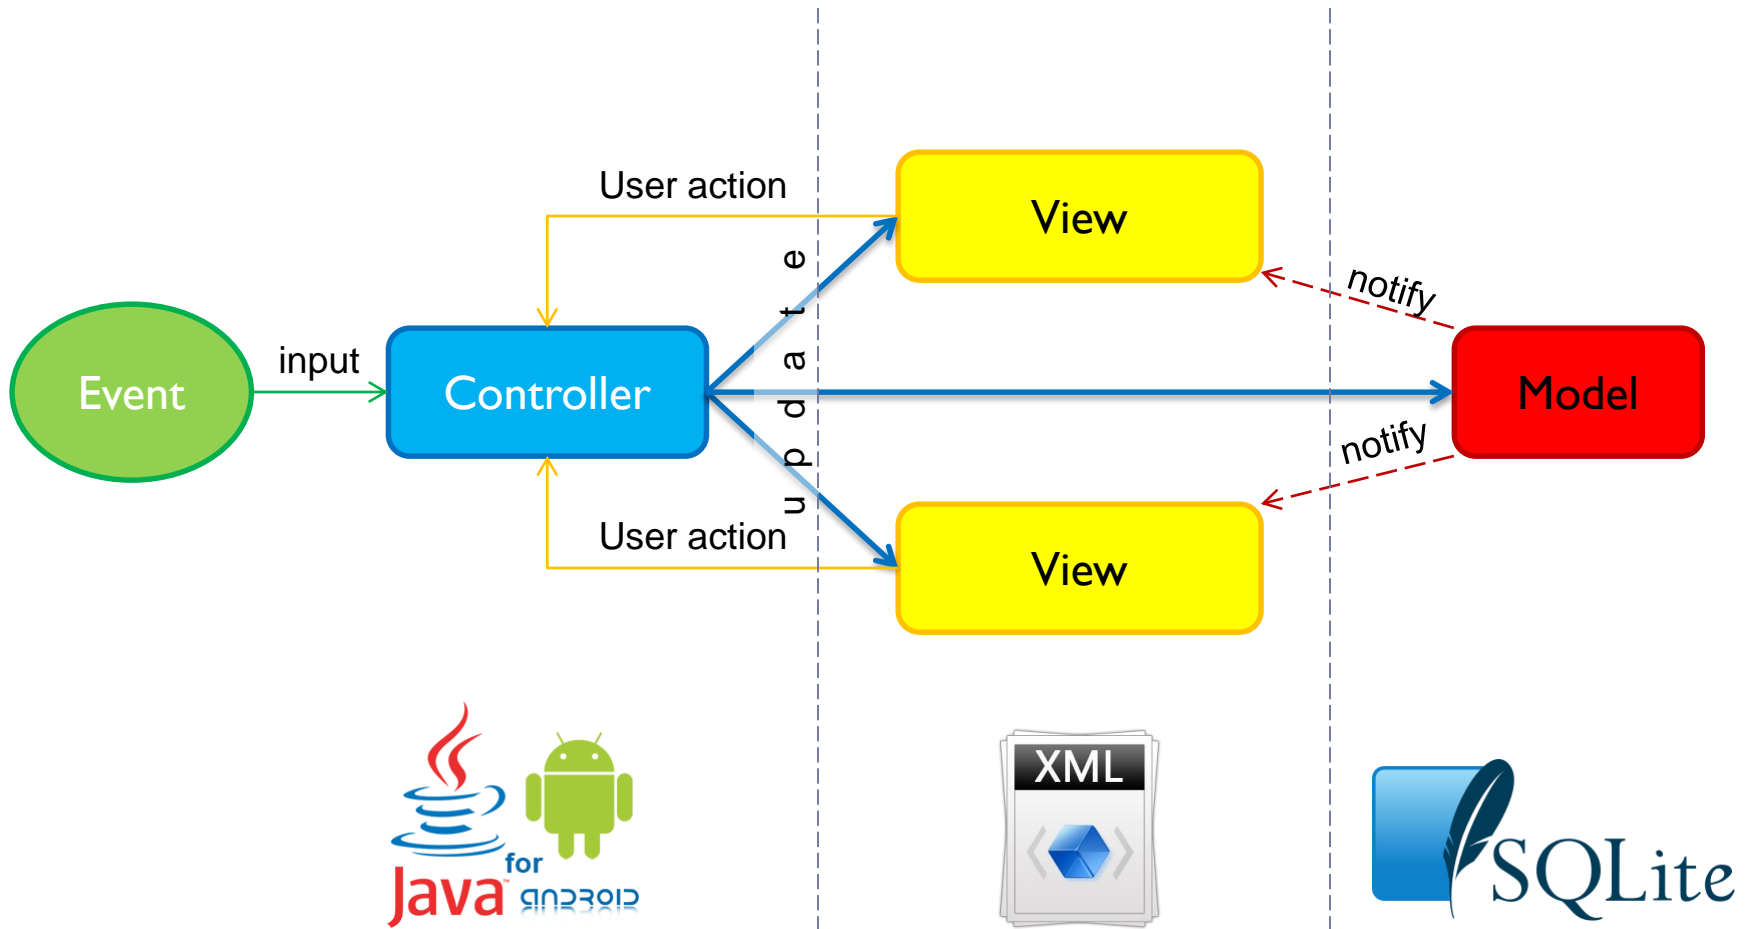

- ▶ Text View
- ▶ Button
- ▶ Toggle Button
- ▶ Check Box
- ▶ Radio Button
- ▶ Checked Text View
- ▶ Progressing Bar
- ▶ Seek Bar
- ▶ Quick Contact Badge
- ▶ Radio Group
- ▶ Rate Bar

Activity Life Cycle

Callback	When
<code>onCreate()</code>	App creation
<code>onStart()</code>	Activity visible
<code>onResume()</code>	after <code>onStart</code>
<code>onRestart()</code>	after <code>onStop</code>
<code>onPause()</code>	another Activity called
<code>onStop()</code>	Activity invisible
<code>onDestroy()</code>	Before Activity destruction

Programming Pattern: MVC

More Basic Components

▶ Intents

- ▶ Asynchronous message that allow Activity to request functionality from other components (e.g. Activity)

▶ Services

- ▶ Like Activities but run in background
- ▶ No user interactions

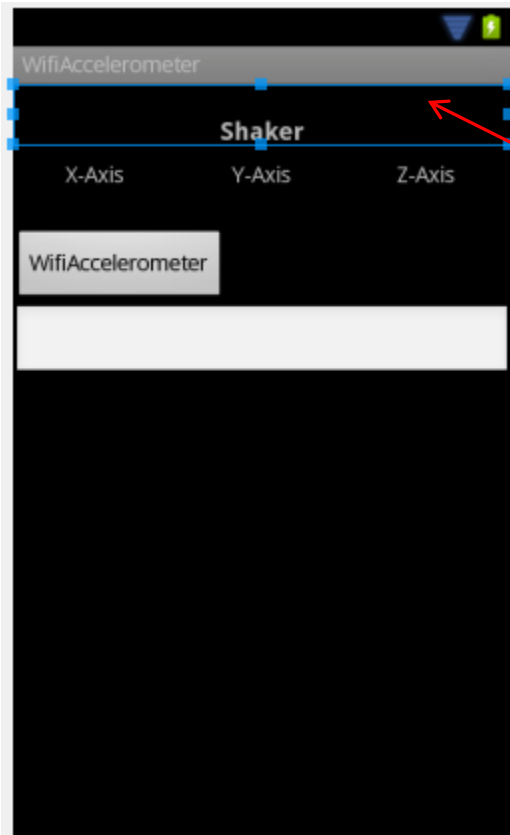

▶ Content providers

- ▶ Standard interface for sharing data among Applications

▶ Broadcast receivers

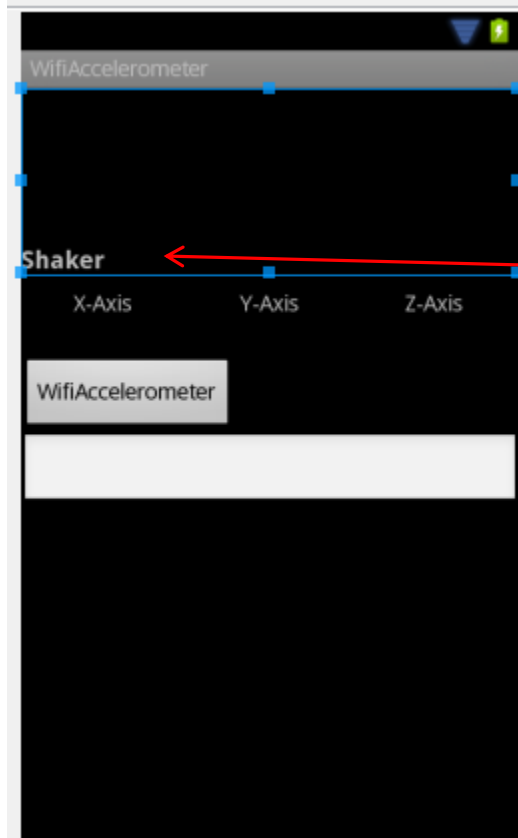

- ▶ Receive notification from Android system

Layout before

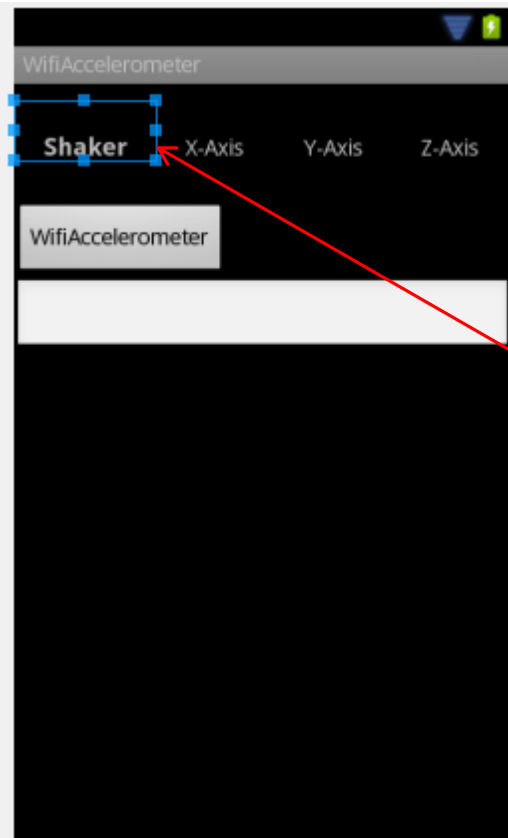

```
WifiAccelerometerAct  R.java  main.xml  »3
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    android:orientation="vertical"
    android:layout_width="fill_parent"
    android:layout_height="fill_parent">
    <TextView
        android:paddingTop="20dip"
        android:layout_width="fill_parent"
        android:layout_height="wrap_content"
        android:textSize="16sp"
        android:textStyle="bold"
        android:gravity="center"
        android:text="Shaker"/>
    <TableLayout
        android:paddingTop="10dip"
        android:layout_width="fill_parent"
        android:layout_height="wrap_content"
        android:stretchColumns="*">
        <TableRow>
            <TextView
                android:layout_width="wrap_content"
                android:layout_height="wrap_content"
                android:textSize="14sp"
                android:text="X-Axis"
                android:gravity="center"/>
            <TextView
                android:layout_width="wrap_content"
                android:layout_height="wrap_content"
                android:textSize="14sp"
                android:text="Y-Axis"
                android:gravity="center"/>
            <TextView
                android:layout_width="wrap_content"
                android:layout_height="wrap_content"
                android:textSize="14sp"
                android:text="Z-Axis"
                android:gravity="center"/>
        </TableRow>
    </TableLayout>
    <TextView
        android:paddingTop="10dip"
        android:layout_width="fill_parent"
        android:layout_height="wrap_content"
        android:text="WifiAccelerometer"
        android:textSize="16sp"
        android:textStyle="bold"
        android:gravity="center"/>
    <TextView
        android:paddingTop="10dip"
        android:layout_width="fill_parent"
        android:layout_height="wrap_content"
        android:text="WifiAccelerometer"
        android:textSize="16sp"
        android:textStyle="bold"
        android:gravity="center"/>
</LinearLayout>
```

Layout after (var.1)

```
WifiAccelerometerAct | R.java | *main.xml X 3
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    android:orientation="vertical"
    android:layout_width="fill_parent"
    android:layout_height="fill_parent">
    <TextView
        android:paddingTop="100dip"
        android:layout_width="fill_parent"
        android:layout_height="wrap_content"
        android:textSize="16sp"
        android:textStyle="bold"
        android:gravity="default"
        android:text="Shaker"/>
    <TableLayout
        android:paddingTop="10dip"

Sensor layers in smartphone

Sensor Categories

- ▶ **HW based sensors**
 - ▶ Physical component built into the device
 - ▶ The data is directly acquired measuring specific environmental properties
- ▶ **SW based sensors**
 - ▶ Emulate a HW based sensor behavior
 - ▶ The data are derived from one or more HW based sensors

Sensor typologies

- ▶ **Motion sensors**
 - ▶ e.g. acceleration, rotation
- ▶ **Position sensors**
 - ▶ e.g. GPS, proximity
- ▶ **Enviromental sensors**
 - ▶ e.g. light, temperature, sound

Sensor List

Sensor	Function Type	Software-based or Hardware-based
Accelerometer	Motion Sensor	Hardware-based
Gyroscope	Motion Sensor	Hardware-based
Gravity	Motion Sensor	Software-based
Rotation Vector	Motion Sensor	Software-based
Magnetic Field	Position Sensor	Hardware-based
Proximity	Position Sensor	Hardware-based
GPS	Position Sensor	Hardware-based
Orientation	Position Sensor	Software-based
Light	Environmental Sensor	Hardware-based
Thermometer	Environmental Sensor	Hardware-based
Barometer	Environmental Sensor	Hardware-based
Humidity	Environmental Sensor	Hardware-based

Accelerometer

- ▶ Typically usages
 - ▶ screen orientation
 - ▶ inclination for game input
 - ▶ vibrations measurements

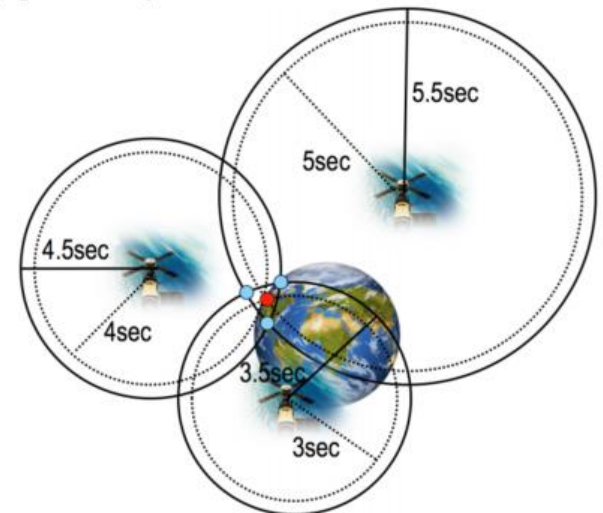

Example	G Force
Standing on earth at sea level	1g
Bugatti Veyron from 0 to 100 km/h (2.4s)	1.55g
Space Shuttle, maximum during launch and reentry	3g
Formula 1 car, peak lateral in turns	5-6g
Death or serious injury	50g
Shock capability of mechanical Omega watches	5000g

GPS

▶ Typically usages:

- ▶ Location
- ▶ Lateration/Triangulation of cell towers or wifi networks (with database of known locations for towers and networks)
- ▶ Location of associated cell tower or wifi network
- ▶ Need connect to 3 satellites for 2D positioning, 4 satellites for 3D positioning
- ▶ More visible satellites increase precision
- ▶ Typical precision 20-50m
- ▶ Maximum precision: 10m

Gyroscope

- ▶ Usages:
 - ▶ Measurements of rate of rotation (angular speed)
- ▶ 3 values related to the axes
 - ▶ Pitch value (rotation around X axis)
 - ▶ Roll value (rotation around Y axis)
 - ▶ Yaw value (rotation around Z axis)

Why Android Apps?

- Cloud computing – sharing computational resources

 - Seattle Project

Seattle

Open peer-to-peer computing

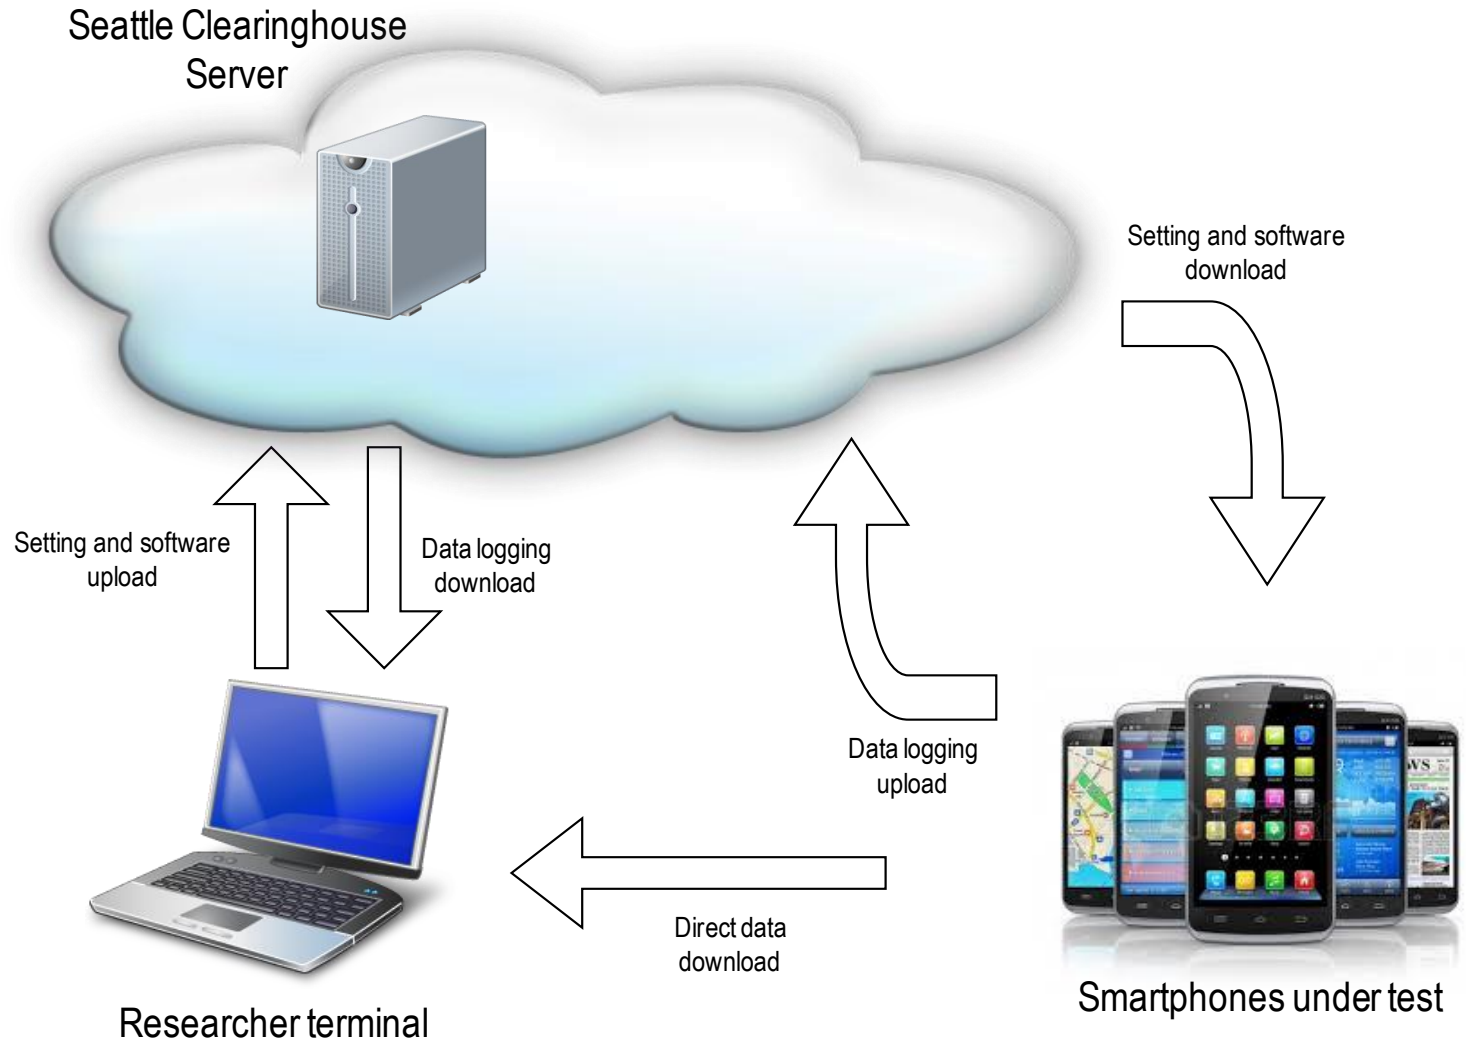

- Data from smartphones sensors useful for multi-disciplines analysis e.g.

 - GPS and accelerometers for behavior analysis
 - WI-FI elaboration for network analysis

- Sensibility Testbed (cloud sensing) is yet in development

Sensibility Testbed – Work in progress

Sensibility Testbed – noise issue

- ▶ Residential zone close to night life locals or concert place (well-known ‘Movida’ in Milan)
- ▶ Industrial activities (daily and overnight)

Sensibility Testbed – advantages

- ▶ No need the direct present of officer

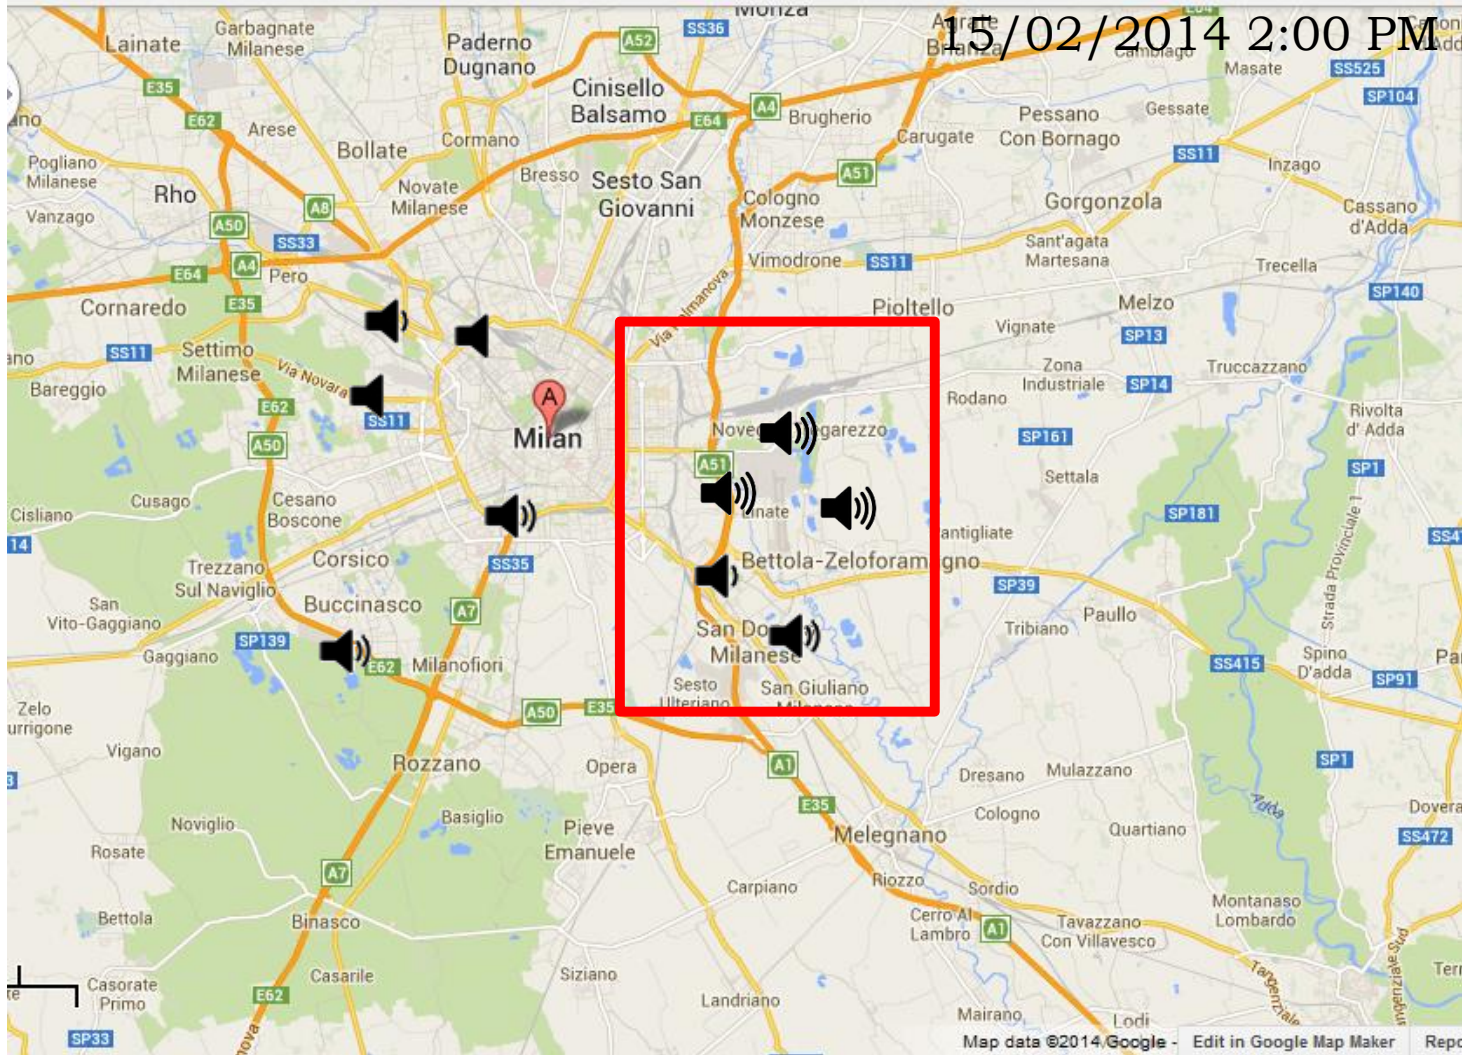

- ▶ Can prevent citizens complaint

- ▶ Provide multiple measurements distributed on all the area at different time periods

Sensibility Testbed – advantages

ANDROID basics

Athlet monitoring

Patient monitoring

Home continuous monitoring

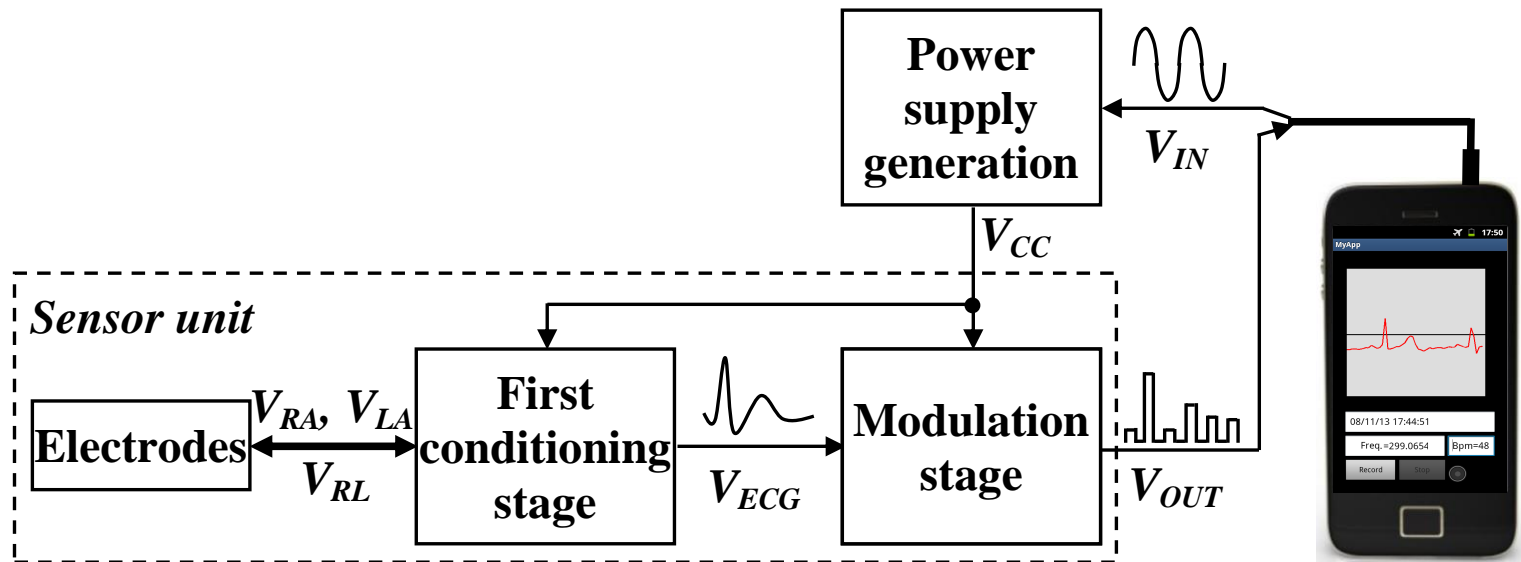

Remote continuous monitoring

Prompt assistance

System

Final Application

**ECG (smartphone) and PPG (tablet) acquisition.
ECG through input jack audio – PPG through Bluetooth**
